Luxury apartments in a prestigious area of central Estoril in Estoril, Cascais

Despite being rebuilt from scratch, the builder of these luxury apartments have taken extra care to make sure the structure is in-keeping with the traditional summer chalet aesthetics, which are typical of the Estoril region. The interior designs give a different feel altogether, with modern architecture and contemporary layouts and finishes throughout, making the properties much more suited to modern day living and level of comfort.

The four apartments are to be sold individually, each is different in size and layout. The smallest of the units still has over 135m² of living space, and a very large balcony in addition. There are three different typologies available, T1+1, T2 and T2+1.

Each material used throughout the construction has been carefully selected, including high resistance tiles, marble and stone. Some additional features to each apartment include heated towel rails and underfloor heating in the bathrooms, central heating system throughout, video intercom entry system, solar panels for hot water and each apartment will have either fantastic sea views or a private pool.
